

## Joysale – Customization

### 1. Referral Function -Registration Process:

If User A shares the App/website link with the referral code "Joysale12345", If the user B gets the share code and in the registration form, Can the user enter the details and referral code means we can track the invite function.

Every user will have a unique Referral code, so other users can use it while registering the app and website.

### 2. Wallet Based – Credit section (Commission credits – Three-level & User can apply for payment & Withdrawal)

User A invites User B to indicate that the agent will be consumer A.

Agent commission we need to consider three levels – User A, User B, User C – User D.

Administrators can set the percentage of commission for each of the three levels in the admin panel

When User B invites User C, Consumer C shares a product that points to Consumer D. If user D the product, it means that user B will receive the agent the root product, and user D will receive the agent commission plus share commission. However, user A does not receive a commission.

Earned commissions will be updated in the wallet separately. User can use the wallet amount to purchase and promote the product. And user can initiate the withdrawal request to admin.

**For the withdrawal,** user need to upload the ID proof

If the user clicks on the "Withdrawal Request" -- Check the KYC audit first -- If the user does not pass the KYC audit.

He needs to provide:

1. Real last name and first name
2. Passport ID or ID card
3. Passport photo or ID photo

The administrator checks the information provided by the user,

If the information is correct, the administrator clicks on the "Review pass" .

After that, the user continues to add the "withdrawal method" – And fill the bank details to submit a withdrawal request.

### 3. Commission Management Three-level tracks & Admin Panel Manages – Referral activities & Commission activities. Need to manage both the frontend and Admin end.
