HTS-QAT 178

SCOPE OF WORK

Scope of work will be mainly used to know more about the project requirements and the project details

Project Name: **By.Chat- Hiddy**

Client Name: **Mr. Karwan Omar**

Platform: **Android, iOS**

By.Chat- Hiddy

In the login page, implement social login options and have to change the signup details based on new requirements. While sending a message we have to give options to share a GIF and multiple images . while sharing an image have to give the option to use filters

In audio and video call pages, Group call and minimize call functions are needed. In the search page, users can search by contact name, video name,group and channel. So if search any keyword it will show result based on this list

From the notification page we can view our own report status, also VIP users can view their viewer list, can activate their own profile as VIP user, can buy power, can change their font size, background image also can set super name. Also have to implement a marketplace concept.

DISCLAIMER

Hitasoft Technology Solutions Pvt., Ltd. has prepared this Scope of Work (SOW) document in accordance with your business requirements. It is crystal clear with accurate details related to your project.

The project will be delivered to you without any flaws according to this SOW. We (Hitasoft team) will carry out the customization work completely depending on this SOW.

The outcome of the project will be totally based on this SOW. We will complete the custom work mentioned in this comprehensive SOW document

Any other changes or inclusions of new features and functionalities during the development and after the completion of this SOW is not possible. All the other functions will work as per the base product.

We request you to review this document fully before signing as the end-product will be wholly based on this SOW.

CONTENTS

UI Design:

Here we attached the phase 2 customization designs in the below dropbox link. Kindly check the SOW with these designs and update us.

Link:

SOCIAL LOGIN OPTIONS IMPLEMENTATION & ICON CHANGES

If open the app it redirected and showing terms and conditions information with Get started button

Now we have to enable "Terms and conditions" manually. In this update we have to check this Terms and condition box as default. So while opening the app it will be selected as default.

In header we have to show this gif logo , hope already we are showing some information in slider view, have to remove that one and replace with this logo

Make new friends

Sign with Google

 Sign in with Apple

Sign with Phone

☑ Agree to Terms of Service and Privacy Agreement

Below we have to show these three icons ,

1. Google
2. Apple login
3. Phone login

=> If selected Google icon, it will redirect to gmail and after fetching the details (Name, Gender, DOB, profile image), it will redirect to the phone number page. So once verified the phone number it will redirect to the signup page

=> Here it will show already fetched information in Name, Username, Age, Gender profile image field. We have to enter Bio information and once click on GO then account will be created

=> For next time when click on Google it will show signup page information, then click on next it will open the app directly

=> Apple login will work the same as google login.

=> Phone number login will work like current flow .

SIGNUP/LOGIN PROFILE DETAILS PAGE CHANGES

➢ After phone number verification it will redirect profile details page, here it will display Name, Username, Profile Image, Bio information, DOB, gender.

MULTIPLE IMAGE & GIF SHARE

➢ In chat, group chat, channel page we can select multiple images and GIf files and we can share it to others.
➢ Maximum we can select 15 images and gif files at a time.
➢ Now we have given option to select only image and videos, in this update we have to give access to select gif image and gif file from gallery

IMAGE FILTER OPTIONS

➢ If select image from gallery then it will show filter options in the header

- ○ Crop => Can crop image
- ○ Sticker & emoji attachment => can add sticker and emoji on image
- ○ Add text option => it will show the keyboard, so can add text.
- ○ Edit icon option with line size change option => using this can draw or write something on image.
- ○ Undo option

➢ In footer have to show "add a caption" field, so we can enter and send the message then it will show image with text information like whatsapp

➢ Near add caption field have to show "round icon with 1" initially it will not selected as default, when tap on it, icon selected and it will show toast "Photo set to view once"

➢ It means sended image once viewed it will be removed and users can't view again also it will not saved in gallery

➢ Above function will work like whatsapp.
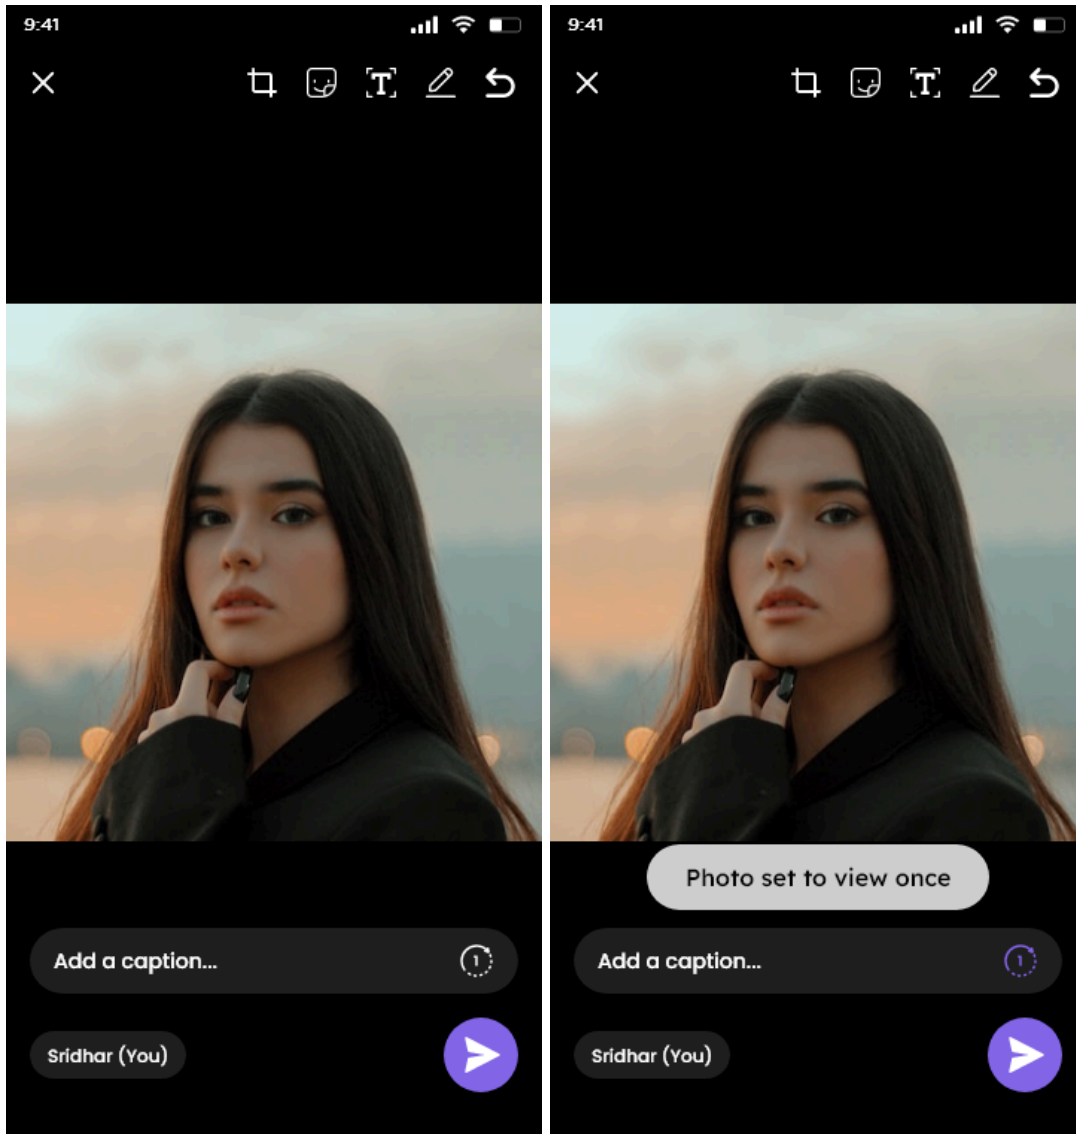

VIDEO CALL & AUDIO CALL FLOW CHANGES

Call functionality:

1. Caller side (Audio & video call)
2. Receiver side

In the single chat page, we have to show a call icon in the footer. When tapped on it, it will show a call history list. We can make an call from hiddy profile page or call history page or chat page

**CALLER SIDE**

GROUP AUDIO CALL:
- ➢ When open inside chat page it shows two option "Audio and video call option "
- ➢ If the user clicks on the audio call then the call screen is displayed . In this time if the opponent user did not connect to call means then we will manage below mentioned options list.
- ➢ While the opponent was not connected on call —>Now we manage options like "User profile with user name, calling (or)ringing text, loudspeaker option, Mute /Un mute option, cancel call icon".
- ➢ While the user starts to call if that opponent was offline then we will show text at "Calling".
- ➢ If the opponent is online then we will show text like"Ringing".
- ➢ If the opponent is online but he did not respond, then we will show text like "Not answered".
- ➢ If the user tries to click on mute/unmute option while the opponent is not attending the call, it should not work until both are connected.
- ➢ After initiating a call, the user can access the loudspeaker option.
- ➢ After initiating a call, the user can cancel the call by clicking on the cancel option.
- ➢ Once the opponent joins the call—> we need to show below mentioned options like "User profile with user name, loudspeaker option, Mute /Un mute option, cancel call icon, Record option for audio call and Add participant option, time duration and back option ".
- ➢ Duration ➡ Once the opponent joins the call then we will start the duration on both sides.

- ➢ Record option➜ This option is only visible to VIP users, so other user pages should not show this option. Please take note. Record option needed only for audio call.
- ➢ If you click on the VIP user record option, the call will record voice from all connected users
- ➢ Back Option ➜ this option is only visible after both are connected in calls. After connecting calls if any one user clicks this option then the call screen was minimized like whatsapp. So this time we need to access all applications and other pages. (But this time we need to intimate the user's call is ongoing).
- ➢ When the user clicks on the intimation box (on going intimation) then the page redirects to the audio call screen page.
- ➢ Add participant ➜ people connection maximum limit based on call SDK. Kindly note it.
- ➢ If user A clicks add a participant option to invite user C means then the call are received to user C.
- ➢ After user A calls user C, wait status should be displayed on user A's and B's side until user C joins the group call . this status will be find out when the user is visiting an already joined user list page (like Whatsapp)
- ➢ Once user C joins into the group call then we will hide the waiting status from that joined users list page.
- ➢ So on the Group call page we need to manage the user's name with total count.
- ➢ Mute / Unmute ➜ Users can mute own voice by clicking this option. Also he can unmute the voice.

Group Audio call page:
- ➢ on the Group call page we need to manage the user's name with total count in the footer page.
- ➢ All users' names are displayed along with their profile picture on the group call page. Also we will show the Mute /Unmute icon near the profile picture (which indicates that the user was muted or unmute).

➢ And the user has to specify whether he is a VIP or not. So we will show a premium icon next to the profile picture. Please take note.

➢ And also we need to show a close icon for every user profile. By this icon, the user can end that user in the voice call. user A joined the group call, then user A can exit user B from group call ? Group have 10 admin, then all 10 admin account have this option to close other user

➢ On the group call page we need to manage these options like " loudspeaker, mute/Unmute, end call option".

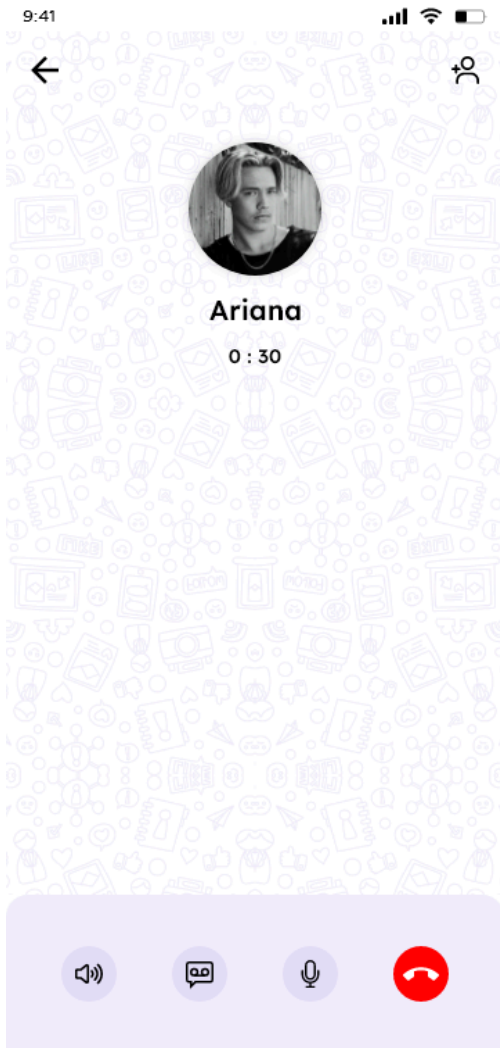

GROUP VIDEO CALL:

➢ If the user clicks on the video call then the call screen is displayed . In this time if the opponent user did not connect to call means then we will manage below mentioned options list.

➢ While the opponent was not connected on video call —>Now we manage options like "user name, calling (or)ringing (or) Not answered text, Mute /Un mute option, camera rotate (front/back)option, cancel call icon".

➢ While the user starts to call if that opponent was offline then we will show text at "Calling".

➢ If the opponent is online then we will show text like"Ringing".

➢ If the opponent is online but he did not respond, then we will show text like "Not answered".

➢ If the user tries to click on mute/unmute option while the opponent is not attending the call, it should not answer until both are connected.

➢ After initiating a call, the user can access the Camera Change (front/back) option. By this user can change her video in front /back.

➢ After initiating a call, the user can cancel the call by clicking on the cancel option.

➢ Once the opponent joins the call—> we need to show below mentioned options like "User name, Mute /Un mute option, Cancel call icon, Camera change (front/back) option and Add participant option, video off ,back option and Filter option".

➢ Video off ➡ Once the opponent joins the call then he is able to turn off the video screen. If user A off video means then opponent side user A video will not be shown.

➢ Back Option ➡ this option is only visible after both are connected in calls. After connecting calls if any one user clicks this option then the call screen was minimized like whatsapp. So this time we need to access all applications and other pages. (But this time we need to show the video on a small screen like whatsapp).

➢ When the user clicks on the small box then the page redirects to the video call screen (full view).

➢ Add participant ➜ people connection maximum limit based on call SDK. Kindly note it.
➢ If user A and user C in call , user A clicks add participant option to invite user B means then the call are received to user B.
➢ After user A calls user B, wait status should be displayed on user A's & c's side until user B joins the group call . this status will be find out when the user is visiting an already joined user list page (like Whatsapp)
➢ Once user B joins into the group call then we will hide the waiting status from that joined users list page.
➢ So on the Group call page we need to manage the user's name with total count.
➢ Mute / Unmute ➜ Users can mute their voice by clicking this option. Also he can unmute the voice.
➢ Effect Filter option ➜ by this option the user can send filters to others (joined all users).If user A sends an effect filter to the video screen, that filter effect will be reflected on all connected users' pages.

Group video call page:
➢ on the Group call page we need to manage the user's name with total count in the footer page.
➢ All users' names are displayed along with their profile picture on the group video call page. Also we will show the Mute /Unmute icon near the profile picture (which indicates that the user was muted or unmute).
➢ And also we need to show a close icon for every user profile. By this icon, the user can end that user in the video call.
➢ On the group call page we need to manage these options like " camera change,video off , mute/Unmute, end call option".
➢ If user A sends an effect filter to the video screen, that filter effect will be reflected on all connected users' pages.
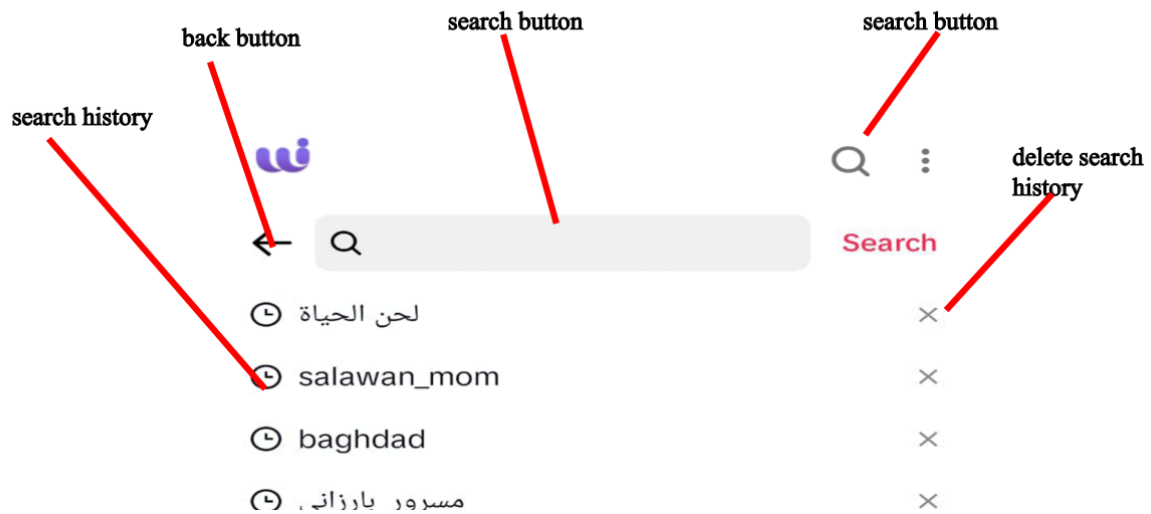

camera off

add effect filter sdk
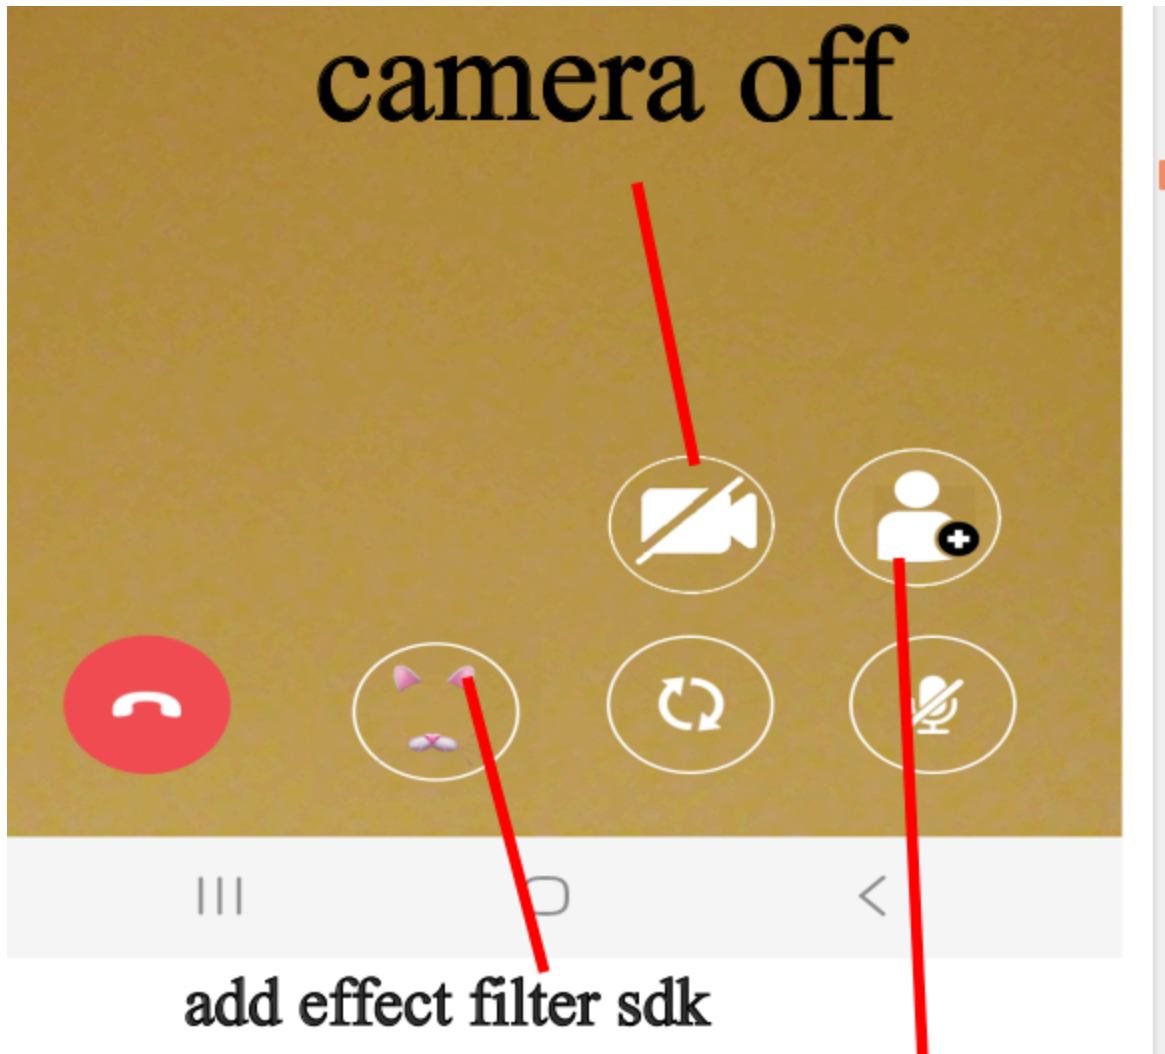

RECEIVER SIDE

- ➢ If anyone initiates call means receiver side it shows these option like "user profile image with username, Accept, decline".
- ➢ Accept ➜ if the receiver clicks on the accept button then the call is connected.
- ➢ Decline➜ if the receiver clicks on the Decline button then the call is declined.

➢ After accepting the call, the rest of the operations work the same as the caller side. Kindly note it.

SEARCH PAGE

➢ In header of all pages, it showing search icon, when tap on that icon it should redirect to search page, For first time it will show the page as empty, after searched the keyword it will show already searched keywords with clear all option

➢ So we can clear the search history. In header if click on search field and enter the name then click on search, it will show keyword based search result in next page, also we can search by using already searched keyword

➢ So in the search page, we have to show results based on the contact list , group list, channel list, videos list.

➢ Ex: If search Foodie then we have to show "Foodie group name list, channel list, contact user list also video" if anyone posted a video with foodie name then it will show this "video name" here

➢ By tapping the name it will redirect to the relevant video page.

search history   back button   search button   search button   delete search history

NOTIFICATION PAGE CHANGES

Notification page, following information are needed

1. Report
2. Viewed user list
3. Ads remover
4. Promote your profile => subscribe profile
5. Glasses for profile
6. Buy power
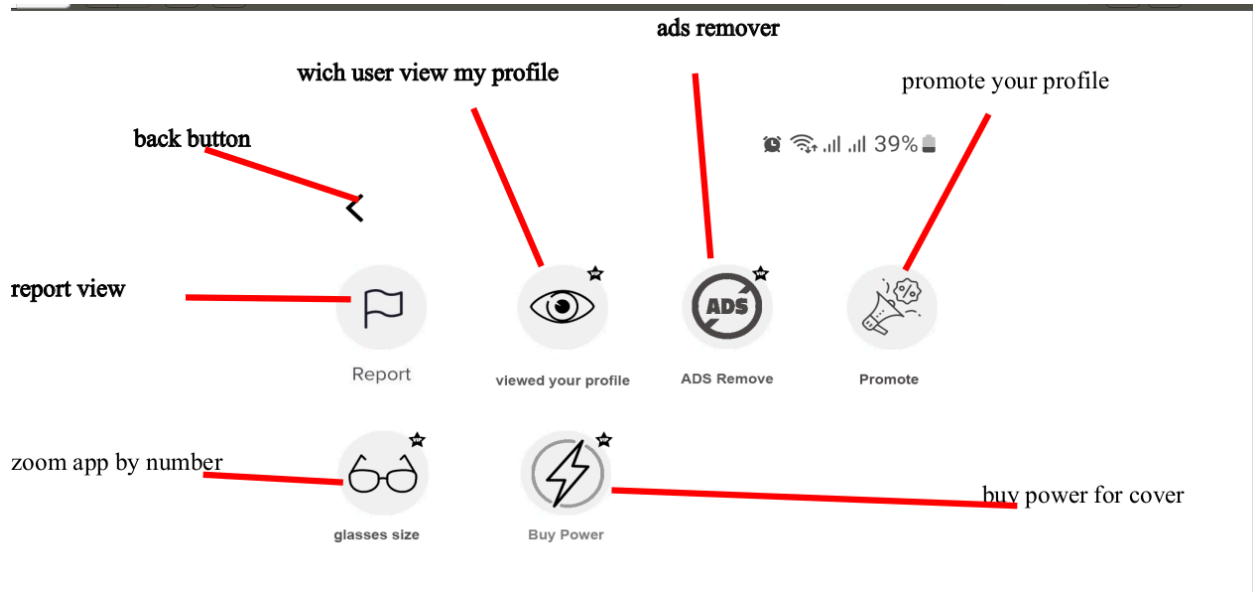

> ➢ Below this information have to show "new followers list and suggested account. Follower account name, profile image and accept, decline button needed. First 10 account list are needed
> ➢ If click on accept then it will be added in our follower list and click on cancel then account will be removed from this page
> ➢ Suggested account list: have to show recently signup user account list

REPORT:

User A reported video and accounts then that list should maintain here

1. Report Logo
2. Reported Date and time
3. Report status => One reported it will be updated from the admin panel and here it will show under review status, admin have two options 1. Blocked 2. No violation. Admin selected no violation then status will be changed here. Blocked then report status will show video blocked

or account blocked status. In admin panel video report and user report should manage separately

4. If reported video then it will show reported video thumbnail, when tap on it, will redirect to video page
5. Account reported show arrow mark to view profile page

VIEWED USER LIST:

Vip users only can view their viewed user list, User A viewed User B profile, then user B account when tap on this "Viewed user list" it will show user A account

Account is not converted as VIP then when tap on this we have to show VIP subscription popup

ADS REMOVER:

VIP users can enable this option, once enabled then Ads will not be displayed in apps. Now Ads showing in between videos, we have not show that ads when user enabled this option

VIP PURCHASE (PROMOTE YOUR PROFILE)
Subscribe option needed in notification page, when tap on it, will show the VIP subscription popup

Once VIP subscribed then we can use following option

1. Record during audio call
2. Can access viewed profile list
3. Can access ads remover tab
4. Can access buy power
5. Can access glasses size

GLASSES FOR PROFILE:

Here we can set font size, if move the font size and click on apply then font size changed for all text in apps

BUY POWER:

When tap on it, it will show three list
1. Power
2. Short name
3. Background

power name section

Power   Short Name   background

Power: here it will show the admin added gif logo with name and price , so user can purchase anyone gif logo

Once purchased this logo will displayed after username, so this logo should show in own profile other profile and near name in all pages

In this page we have to show remove button, if not needed we can remove

If user select any one gif logo have to show payment popup, here it will displayed price with " stripe payment, use points option" so we can buy using points and stripe payment method

Gif Logo, price, gif name all details should manage in the admin panel, user purchased log should update in admin panel
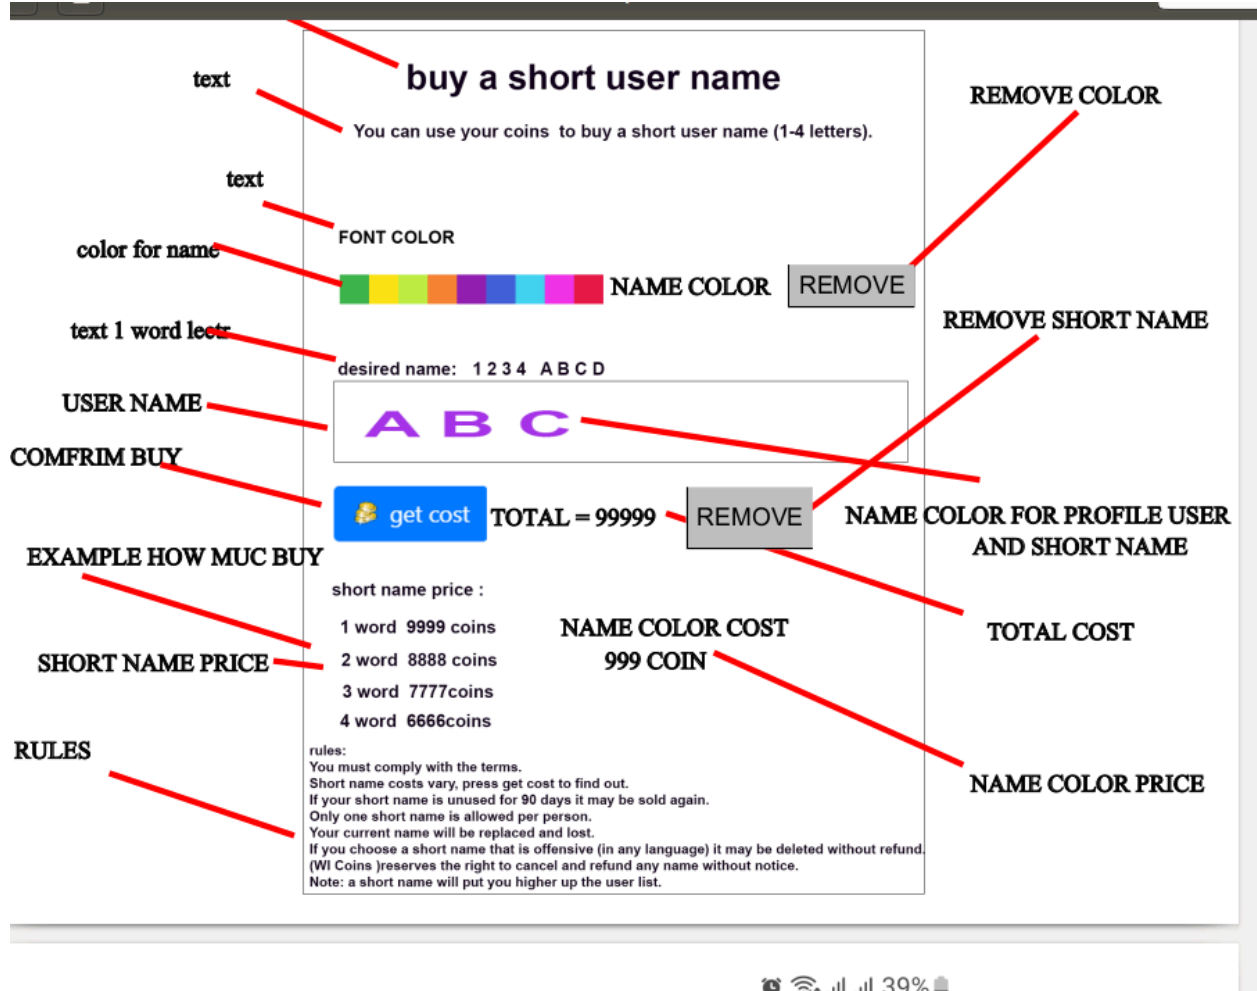

SHORT NAME:

From this page, we can buy any one name. We can enter the name and change the color then click on buy it will show the amount.

Amount based on the letter count, so in the admin panel letter count and price should be managed correctly. If entered two words then price deducted based on this package

Name should be unique, if anyone is already taken we have to show an alert before purchase. Once purchased then this short name should display in other profile page and own profile page of this user account

We can purchase maximum 4 letters

buy a short user name

You can use your coins to buy a short user name (1-4 letters).

If your short name is unused for 90 days it may be sold again.
Only one short name is allowed per person.
Your current name will be replaced and lost.
If you choose a short name that is offensive (in any language) it may be deleted without refund.
(WI Coins)reserves the right to cancel and refund any name without notice.
Note: a short name will put you higher up the user list.

BACKGROUND

➢ From admin panel, we have to manage "background gif image" with cost and image name

➢ So added information will be displayed for users. If any one user wants this background, they have to purchase it. Once purchased this background will be set in the profile page. So own and other profile page we have to show this background correctly

➢ Payment system is stripe and Buy using points method

➢ In header should show selected background with user profile image and short name
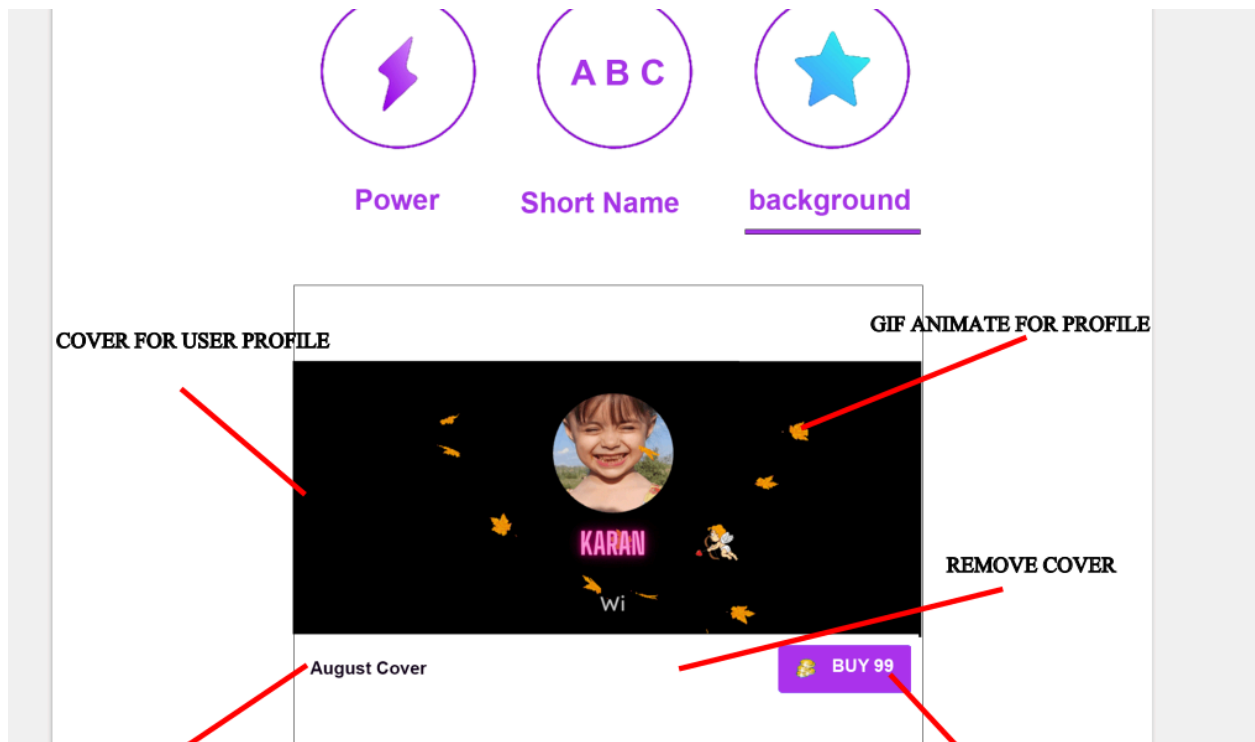

Market Place

➢ Now we need to add the marketplace option in the app, for this we need to add this "Market" option next to the wallet tab

➢ Hope already call option are there near wallet, now we have to move this call option to first tab footer

➢ In the Market page we can search for products and can do online shopping.

➢ Users first open the market page and need to show the app in a popup AD screen with a close button.

➢ Here we need to manage that ad from the admin panel and we need to add a separate option to add that image.

➢ Once users close that ad popup we need to show the marketplace home page. Click action not needed for this ad.

Marketplace home page:

➢ In the market page header needs to show the location selection option. Here users enter the location needed to show the location suggestion based on the entered keyword.

➢ By default when the user opens the marketplace page we need to show all products in the home page.

➢ If the user sets the location, it means we show the home page products based on the user selected location within 200 KM.

➢ Then below the search, we need to show the categories by scrolling type. Admin added categories should be shown here. By clicking any

one category it will redirect search page and it will show result based on this selected category

➢ After the category we need to show the slider banner. Here this slider banner also managed from admin with url.

➢ Users clicking the banner we showed the admin added a url page and that banner should be changed to the next slide automatically after 5 seconds once.

➢ Below the banner we showed the products, so without the user selecting the location we showed the all products in the home page, if the user selects the location we show the products based on the user selected location.

➢ Then in the footer we need to show 4 icons there is Home, category, cart and profile icons

➢ In the home page we need to show the above mentioned details.

➢ Then in the category page we need to show all categories in the sidebar list wise.

➢ In the cart page we need to show the user added cart items.

➢ The profile page we need to show that user profile details. (already we have the user profile page, so we show that same details in this profile)

➢ Above the footer we show the + icon, here users click this + icon we show the "order history", "send Gift" and "Help Center" options.
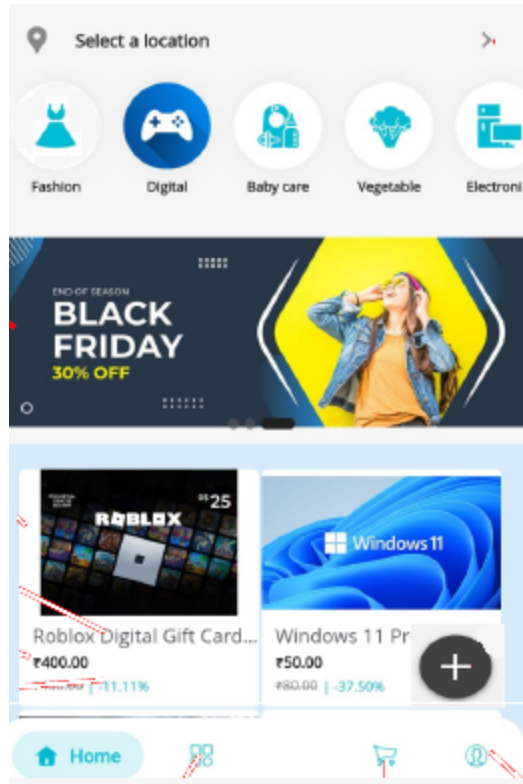

Product view:

➢ In the home page we show the products like product image, below the image we show that product name, price with currency, discount price with percentage like in below attached image.

➢ Click that product means we show that product view details page. In that page also we show the product image, name, price with discount and description with quantity.

➢ And then show the add to cart option, buy now button. So users can purchase the product with single or multiple quantities or add that product to cart.

➢ Those add to cart items are shown in the cart page.

➢ In product details page have to give option to select quantity

Note: Admin have only access to add products. Admin can add 5 images for a single product, all 5 images will be displayed in the product details page. When tap on it, it should show full view page

Category and search page:

➢ In the marketplace home page we have a search bar. If a user clicks that search bar we need to show the category page. If the user clicks the category icon in the footer also we need to show this same page.

➢ In this page we need to show the categories list wise like in the attached image below.
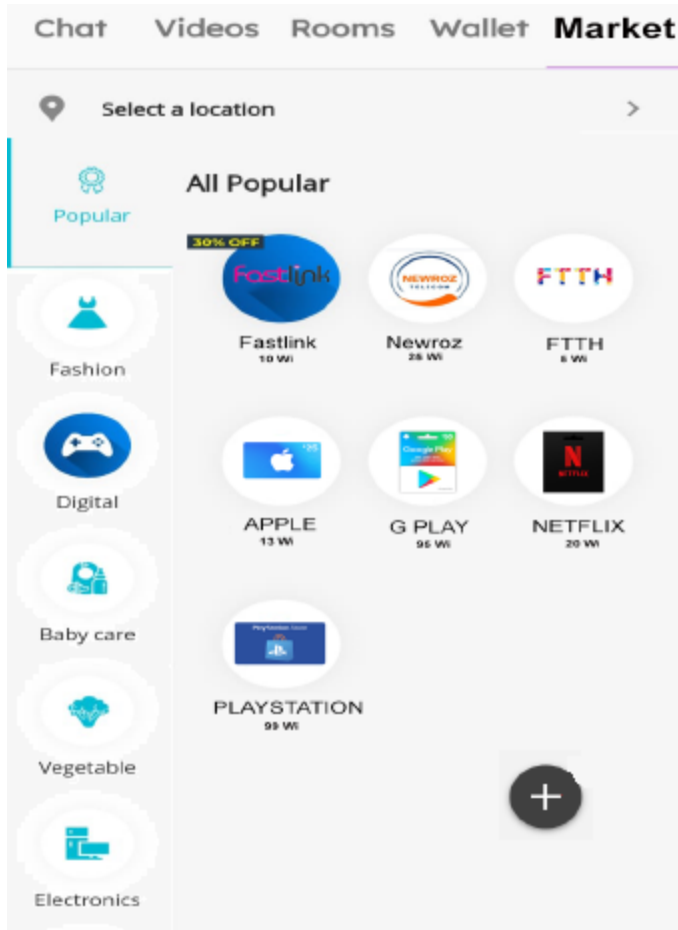

➢ In the header we show the location bar in this page for the location, here show the user selected location in that bar, if the user did not set any location means show empty.

➢ Then in the first tab we need to show the popular tab

➢ Here the user views the popular tab and needs to show the products based on the view counts, so which product has a high view count means show that first and second wise like in above mentioned image with all popular.

➢ If that popular product has any discount we show the discount options in the top bar on that product like the above attached image.

➢ Then below the popular tab we show all categories, users select any one category and we show products based on that category.

➢ It should show the product category name with a symbol.

Cart:

➢ In the cart page we need to show the users added "add to cart" cart items in this single page.

➢ Users view any products in various categories, so user can add the items to cart from the various categories, so no need to restrict.

➢ So that already added cart items are shown in the cart page with quantity and prices.

➢ Her users can remove that product from cart or add the product quantity and checkout and buy the products.

➢ So added product image, name, quantity, price information will be displayed here, by taping images we can view that product. Also from cart page we can increase the quantity

➢ In cart page click on buy button it will redirect to address selection page

Buynow:

➢ In the view product page we have shown the buy now option to buy the product directly.

➢ For the buy now process we use the points, giftcard, stripe payment gateway, stripe also supported the (apple pay and google pay). For this we need to manage the payment options in the admin panel.

➢ So once the user clicks the buy now button we need to show the popup for entering the product delivery address with a close icon. Here the user clicks the close icon needed to close the popup.

➢ In the delivery address popup we need to show the Name, country, city, state, pincode, address, phone number.

➢ Once the user fills in all the details and clicks the next button we need to show the check out page with price details with the next button in footer and back icon in the left side header.

➢ Users click the next button to show the payment options like stripe card, (apple pay and google pay) or Pay with coins or pay with gift card. For gift card we have to enter a coupon code. We have to pay remaining amount in another payment system

➢ Here the user can select any option for payment stripe or coins or gift card,while applying gift card or coins so user once select and complete the payment means order created and that update in admin panel and user order history page.

Your order has been placed successfully,
we will get in touch with you shortly.

Details

Order number:	ORD001320
Payment type:	Card
Order type:	Delivery
Order status:	Pending
Payment status:	Paid
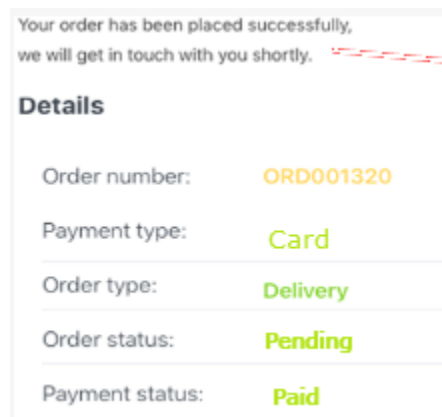

➢ Here after the user completes the payment we need to manage some details for the user and admin panel.

➢ The details are order number or id, payment type, order status and payment status and date and amount.

➢ Users using coins to purchase the product need to update that purchase history in the wallet history page for purchase with order ID. Same as product cancellation means refund coins update in the wallet and update that history in the wallet history page.

Button for Order history, send gift and help page:

➢ As mentioned in above, in the marketplace home page footer we show the + icon, here users click this + icon we show the "**order history**", **"send Gift" and "Help Center**" options.

➢ Here we need to show that + icon in all pages in the marketplace page on Home, category, profile, cart page.

➢ Users clicking the + icon we need to show 3 options called "Order history , Send gift and Help" and close X. Once the user clicks the X icon close the 3 options and show + icon.
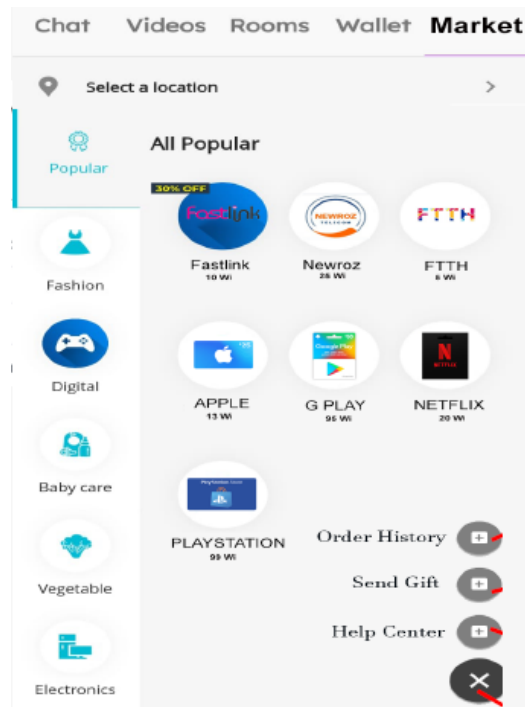

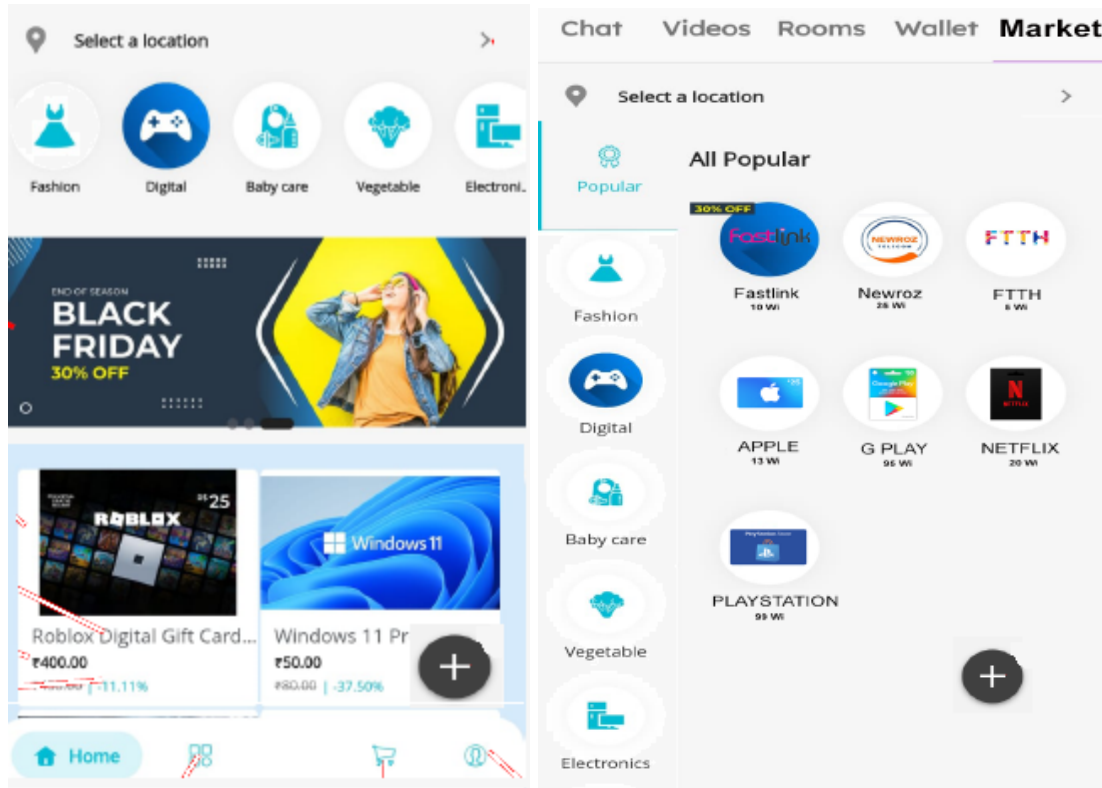

Order History page:

➢ In the order history page we need to manage all orders and we need to separate 2 tabs like **Pending** and **Completed**.

➢ And in order history page header needs to show the search bar for searching the order using the product name or order id.

➢ Then the user orders any product after completing the payment and needs to update that order in this order history page on the pending tab.

➢ Here we show all pending, processing, shipping status orders in the pending page. (In admin panel, admin change the status that are update in the user side)

➢ For the Completed tab we need to manage the delivered and canceled orders.

➢ So we need to show the orders list wise, user click any one order we need to show that order details page with product information, order number or id, payment type, order status and payment status and date , amount in both pending and completed tab.

➢ If the pending page order was in pending status, we need to show the **cancel order** button for the user

➢ Once admin changes the order status pending to processing means need to hide the cancel button

➢ Here order was canceled by a user or admin declined means we need to refund that amount to the user via wallet and show that order to the completed page with order number or id, payment type, order status (canceled or Rejected) and payment status (refunded) with date and amount.

➢ Order is shipped then should show mark as delivered button for user, user changed the status as delivered then it moved to completed page

Send Gift Card:

➢ In the gift card page, we have to show the received gift list. In header we have to show send gift option

➢ Here the user clicking the send gift page we need to show the new page for sending the gift.

➢ On that page have to show following options

1. Select user option
2. Description field
3. Enter price field with default usd currency
4. Send button

When click on select user option, it will show contact list like single chat page

➢ Here once users enter the amount in the price field we need to show the stripe and wallet options for sending the money.

➢ Users select the stripe needed to show the payment page, once the user completes the payment they need to add that money, if the user selects wallet and send means need to reduce that money from wallet.

➢ So send to user A, then user A account we have to send push notification.

➢ In gift page it will show received log like " User A shared Gift voucher to you 200 $ view option also below of this text date information needed

➢ In the view page need to show the total amount, Remaining amount, copy voucher code, description and shop now button like below attached image.

➢ Click on shop now then need to redirect marketplace home page, here users can purchase a product using this gift card

➢ Need to update that send gift log in admin panel.
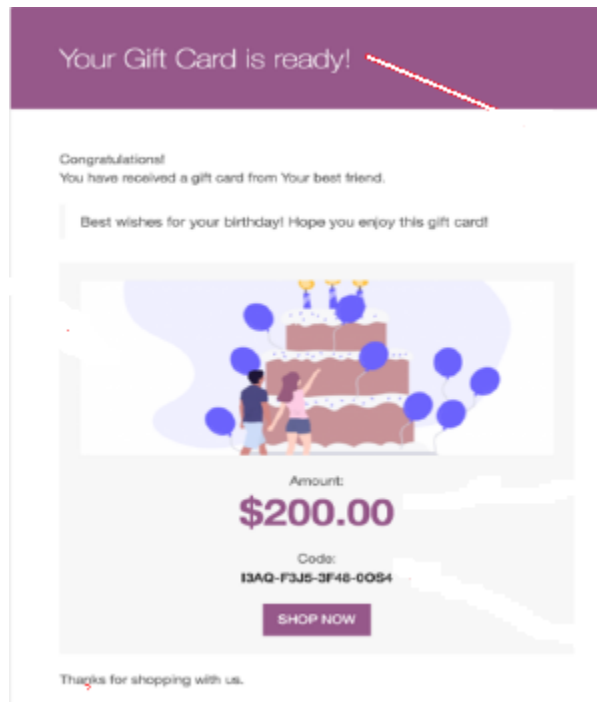

Help Center:

➢ User clicks the help center option we need to show 2 options like "Help live chat" or "Help Desk".

➢ User select the Help live chat means we need to implement the live chat bot like in our appkodes site

➢ If the user selects the Help desk it means we show the form for entering the user help query, for this we need to get that user name, email id, query field with send button.

➢ Once the user fills all the fields and clicks the send button we need to show the success alert.

➢ Here we need to save that user help query in the admin panel, once admin views that query and send the response to that user mentioned email id.

Admin panel changes for Marketplace:

➢ We need to add the separate option in the admin panel for add product options in the market place.

➢ For this we need to add "Product management" page, in the product management page we need to show the add product, view and edit product, add category, view and edit category pages.

➢ In the add product page we show the category selection, image upload field, name, description, quantity, price with default USD currency and discount field for entering the percentage. Location field also needed

➢ Once admin add the product that need to show that in the app marketplace page with the correct image, price with discount price and details.

➢ Here that admin added product show in the view page, in the view page showed the edit and delete option. Once admin delete the product means need to delete that, it try to edit means need to show the edit page with all options are editable.

➢ In the add category page we show the category name, image upload field, once admin added the category need show that in add product page. If the category is empty means no need to show that in front end.

➢ Here that admin added a category show in the category view page, in the view page showed the edit and delete option. Once admin delete the category means need to delete that if not products are there, it try to edit means need to show the edit page with all options are editable.

Order management page:

➢ In the order management page, we need to show the orders like the below attached image.

Manage Orders

| Rejected | Refunded | Cancelled | Delivered | Shipped | Processing | New Orders |

Order ID	Buyer	Order Date	Item Cost	View
		📅		

➢ Once user place the order need to show the in the new orders page with, order ID, buyer name, date, cost and view button. Here processing, cancel button needed

➢ The view page needs to show the processing and cancel button with users details like buyer name, product delivery address, order number or id, payment type, order status and payment status and date and amount with invoice.

➢ Once admin clicks the cancel button, the admin needs to refund the amount to that user and change this order status to rejected and update that into the refunded and rejected page.

➢ Refunded amount updated in wallet page.

➢ If once an admin clicks the processing button need to change to the processing page and need to update the status to processing for users and hide the cancel for user and admin.

➢ Then in the processing page you need to show the shipping button, once admin clicks the shipping button, you need to change that product to the shipping page and update that status to shipped to user.

➢ Then once that product was delivered to the user, the user changed that status to delivered that showed in the delivered page and showed the status completed.

Add banner and ADS:

➢ In the app marketplace page we showed the banner Ad and popup Ad when the user opened the marketplace page.

➢ For this we need to add an option in the admin panel for adding the banner Ad and popup Ad with size.

➢ For the popup Ad we only show the upload image field and that image should support JPG,JPEG and other supported images format only with size.

➢ For the banner Ad, we need to show the image upload field with size and url field. Here the admin add the image with url means the need to be shown in the app home page.

➢ Users clicking the banner ad need to redirect to the concerned admin added url.

➢ For this banner and popup Ad need to show the view, edit and delete options.

➢ So admin can view that Ad, in the view page need to show the Ad posted date with url and image.

➢ In the edit page show the image, url edit option, once admin edit the image and url save means that need to update in apps. And the admin clicks the delete button need to delete that banner Ad from the app and site.

Gift card management:

➢ In this page, we need to manage the send gift users details, for this we need to show the S.no, sender name, received name, amount, type(stripe/wallet), date for admin reference.

➢ Here the sender and receiver name field need to show the user name.

Implement the payment gateway:

➢ In this app, we have implemented the buynow process, for that we need to add the payment gateway.

➢ We need to implement the stripe payment gateway, so we need to manage the stripe keys in the admin panel.

➢ Once a user purchases the product means that paid amount needs to update these admin added stripe account.

Help management:

➢ In the apps, user sends the help query form to the admin means need to manage that user help query.

➢ For this we add the new option in the help page called "Users help query".

➢ In this page we need to show the S.no, user name, email id, query.

➢ So the admin see the user help query and can send the reply to that user email id directly.

S.No	Name	Email Id	User Help Query
01	Lingam	lingam@gmail.com	What is procedure to change the mobile number
02	Newton	newton@gmail.com	How can add the products?

REPORT MANAGEMENT:

In the admin panel, the report status update option was needed. 1. Blocked 2. No violation. So admin selected any status that will be added as selected mode. Admin can change the status at any time
